- Conjunctival mucosa with lipogranulomatous inflammation consistent with a chalazion.

01/05/07 ML/jr

Mary L. Lynch, M.D. 05 JAN 2007
Report Electronically Signed

Specimen Type/Source:

Right eye conjunctiva mass

Clinical History:

None given.

Gross Description:

Specimen labeled 'right eye conjunctiva mass'. Submitted a slightly mottled tan fragment of tissue measuring 6 x 2 x 1 mm. All the tissue is submitted in a single cassette.

1-4-07 rv/ hol

Microscopic Description:

This is conjunctival tissue with lipogranulomatous inflammation. No neoplasm is identified. AFB and GMS stains are negative for acid fast mycobacteria and fungi. The features on this biopsy are consistent with a chalazion.
